NEUROSHIMA HEX!

Army tuckboxes

Instructions:

Well, it´s pretty straightforward procedure, as tuckboxes go.

- Print out the sheets you need on any paper, the heavier the better, preferably on cardstock paper. I´ve designed around the tiles from Z-Man edition, and I wanted a tight fit. If you doesn´t feel comfortable with such precision, then at the print dialog, adjust the page scaling to cca. 105%.

- Cut out the boxes along the edges. On the non-printed side, scratch the lines with an empty ballpoint pen where you should fold.

- Glue the back of the hexes, and fold them in double with the white ears caught between them. Use clips, forceps, g-clamps, your fingers or any device to hold them together until it dries completely.

One down, three to go. Enjoy!
